

**Anti-Coagulation Crib Sheet** – last updated: Thursday, 23 April 2009

The summary grid lists the current status of all required data, and the red indicator is active because the patient has not yet started this Enhanced Service. **This item should always be recorded first.**

Indicates data has never been entered

Description
Anticoag - enhanced service
Warfarin therapy started
Prescription
Duration
Diagnosis
Target INR
Therapy record given
Locus of care
Warfarin therapy stopped
Anticoag - enhanced serv complete

Doing this, records the 'Trigger Code' ensuring that the patient is now included in the Enhanced Service claims.

Other requirements for payment are:

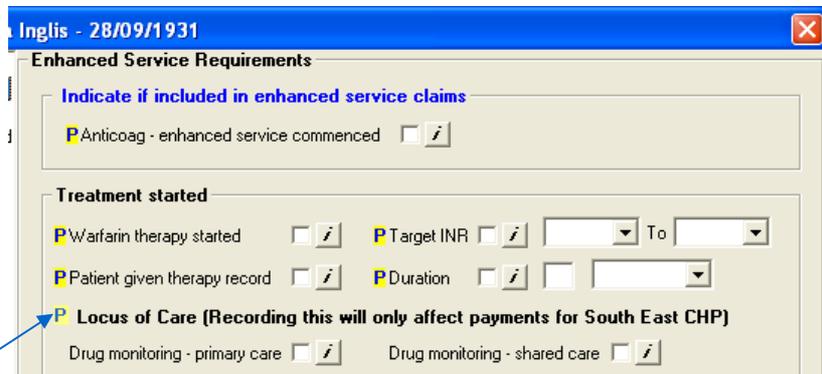

**Warfarin Therapy Started** (this should be recorded on the same day, or anytime after Enhanced Service commencement.)

A **Warfarin prescription** (should be recorded during each financial year in which a claim is made.)

**Duration, Diagnosis, Target INR, Therapy Record given, and Locus of Care** (should be recorded at least once since the starting the Enhanced Service)

Warfarin Therapy stopped and 'Enhanced Service complete' enables clinicians to see at a glance if treatment has stopped and if the patient has been removed from this service. Although not required for payment, these should be recorded to ensure the patient drops off the list of Enhanced Service claims at the end of the Financial Year.

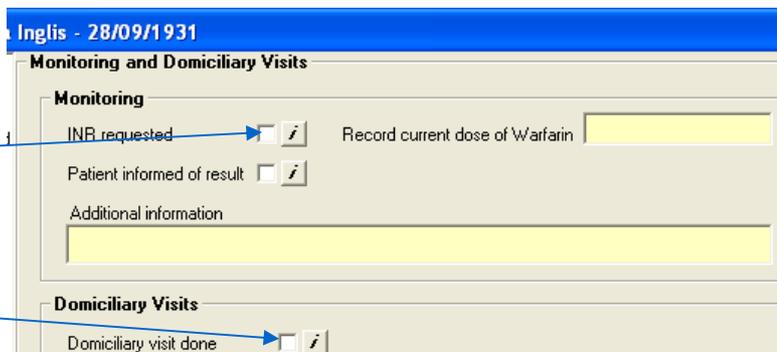

On this screen all items with a blue 'P' on a yellow background are mandatory requirements for payment, and on the 'treatment started' section you can see that there are numerous indicator prompts for required data.

There's also a 'P' against Locus of Care – (Drug Monitoring (Primary Care) and Drug Monitoring (Shared Care)). For **South East CHP only, recording Drug Monitoring (Shared Care) will result in a lower payment.**

There are also a couple of other screens.

Monitoring and domiciliary visits, where you can record that INR has been requested, and you would normally enter the dosage of Warfarin at the time of taking the blood sample. Domiciliary visits are also recorded here.

## Anti-Coagulation Crib Sheet – last updated: Thursday, 23 April 2009

The next screen is Treatment Complications or Treatment stopped. This is where you would record any complications the patient may experience, or if they have stopped their treatment and if you wish, whether or not it was due to any complications.

If the patient has completed treatment and come off the Enhanced Service it should be recorded here to ensure the patient drops off the list of claims at the end of the Financial Year, otherwise the patient may continue to show up on the list as a fail because there would be no current scripts etc.

The screenshot shows a software window with a blue title bar containing the text 'Inglis - 28/09/1931'. The main content area is divided into two sections: 'Complications' and 'Treatment Stopped'. The 'Complications' section has four checkboxes with corresponding labels: 'Haemorrhage', 'Adverse reaction to warfarin', 'Warfarin side effects', and 'Poor compliance'. Each checkbox has a small icon to its right. Below this section is a yellow text box labeled 'Additional information'. The 'Treatment Stopped' section has two checkboxes: 'Warfarin stopped' and 'Anticoag - enhanced service completed'. The 'Warfarin stopped' checkbox is checked. Below these is a dropdown menu for 'Date stopped' with the value '23/04/2009'. At the bottom is another yellow text box labeled 'Additional information'. Blue arrows point from the text on the left to the 'Complications' and 'Treatment Stopped' sections.

### SV Tool

On the SV Tool, after giving our selected patient a prescription, we can see that the patient now meets all the criteria for payment.

Failed patients are also listed giving clear indicators of required or missing data.

'Enhanced service complete' lists all patients who completed the enhanced service prior to the beginning of the current financial year.
